Melting point 265°C

Elongation at break 7%-17%

Specific Gravity 1.38g/cm<sup>3</sup> (sinks)

Double Braid Polyester ropes are synonymous with excellent resistance to UV and general climate conditions whilst providing good strength and abrasion resistance. Unlike with Nylon, ropes made from Polyester stay soft and flexible in the wet and offer reduced elongation. A pre-stretched range is available from stock for even further reduced stretch in use.

Double braided ropes offer the advantage of two ropes in one;

the braided core providing the tenacity and stability and the overbraid for extra strength and wear resistance making for a high-quality long-lasting rope.

Our double braided ropes are produced in diameters as high as 80mm and can be supplied cut to length and spliced accordingly. Excellent for Capstan winching, widely used in the Cable Pulling industry / Forestry as well as many other marine and industrial applications.
